Cabasse reveals PEARL AKOYA

Following the success of THE PEARL, launched at the end of 2018, Cabasse, the historical leader in the acoustic market in Haute-Fidélité, today announces his new acoustic jewel THE PEARL AKOYA.

This new connected loudspeaker active High Definition, created and developed at the forefront of Brittany, concentrates all expertise and technology in the mythical sphere, in an ultra-compact active containment. Noble material, elegant and luxurious design, THE PEARL AKOYA gives as many emotions as its extremely powerful THE PEARL, with a sound of extreme purity, without change, color or distortion. A jewel of technology delivered with luxury accessories (remote control, custom carrying case ...) available from November 2019.

Inventor of the technology for coaxial speakers that has made the brand reputation for decades. succeeded once again with THE PEARL AKOYA's technical performance: to develop and integrate in a reduced and spherical volume (as a reminder height of 32 cm for THE PEARL versus 22 cm for THE PEARL AKOYA), the most compact triaxial speaker ever made (bass, medium and new coaxial tweeter with medium carbon and neodymium) for minimal footprint, maximum power handling and an extended and smooth frequency response from 30 Hz to 27000 Hz without directivity, color or distortion. The music is free from technical limitations and is nothing more than emotion

With a sound power corresponding to a classical orchestra (115 dB) and Cabasse acoustic expertise, THE PEARL AKOYA faithfully respects the dynamics of the sound source. Its 17cm Woofer enables a linear excursion of more than 20 mm, and offers the richest base level in the market.

Like high-end speakers in the brand like Sphere, this new speaker is equipped with a patented automatic calibration system (CRCS) for an optimal acoustic experience regardless of listening environment

It is also possible to create a stereo system with unparalleled performance with two speakers THE PEARL AKOYA Wifi and no extra box, to listen to dematerialized sources, but also a TV, a CD player or even a combination of platinum and phono preamps to listen to vinyl through its optical inputs or Jack 3.5 mm.

THE PEARL AKOYA plays the seduction card. Its spherical shape, like the jewel in which it bears the name, both softness and strength, in full faithfulness to the demands of the Breton brand, evokes an incomparable spatial cohesion. The form follows the function.

Its noble material sublimates performance: no less than 6 layers of lacquer are necessary to get the best possible finish in the two possible surfaces: black metal ring pure chrome or white pearl silver ring, but also carbon diaphragm, heat sink and speakers in aluminum, reinforced double shell with glossy surface and magnetic metal grille with Cabasse logo ... makes THE PEARL AKOYA speaker, a beauty of technology.

THE PEARL AKOYA, equipped with Bluetooth and Wifi connection, seamlessly integrates with StreamCONTROL Cabasse multi-room system and allows playback of all audio files: from MP3, AAC, WMA to AIFF, FLAC, ALAC high definition files, whether they are stored on discs hard drives or computers, whether offered by Internet radio or online services directly available in the StreamCONTROL application (Qobuz, Deezer, Spotify, Napster, Tidal ...)

Voice Controlled, THE PEARL AKOYA is compatible with Google Assistant voice assistants and soon Amazon Alexa. In addition, THE PEARL AKOYA is compatible, with no extra box, with the entire CABASSE flow range, allowing for an exceptional acoustic multiroom experience.

PEARL AKOYA is always accompanied by a controller connected to the surfaces refined and elegant and ergonomic design. No need to use your smartphone, this remote-controlled Bluetooth, which holds in the palm, can easily control the device.

In perfect harmony with his big sister THE PEARL, THE PEARL AKOYA is available in black metallic or mother-of-pearl from November 2019 at a suggested price of 1490 € – and includes a custom carrying case, a fabric power cable, a 3.5 mm socket and micro USB-adapter. A foot and a wall mount are also available.
