SANTORIN 30-200

DEEP AND MUSICAL BASS

The Santorin 30-200 subwoofer uses acoustic technologies developed directly from the flagship La Sphère, which enable very deep and musical bass to be reproduced from a small cabinet size. For music and movies the generous and dynamic output is both accurate and impactful and integration with the rest of the system is seamless, thanks to the downward firing 360° vertical vent technology.

SANTORIN 30-200

30CM HONEYCOMB MEMBRANE

The honeycomb structure of the 30 cm woofer in the S30-200 permits a long excursion without deforming and distorting. High sound levels are possible across a wide frequency range thanks to the long voice coil, Kapton former and powerful magnetic field.

DOWN-FIRING 360° VERTICAL PORT

The horizontal vent has been replaced by a vertical one, down-firing in 360°. Vent noises are filtered, the standing wave phenomenon inside the cabinets damped, positioning of the speakers in relation to the wall less critical, low-frequency reproduction purer and deeper, always lively and dynamic.

SPECIFICATIONS

Position	Floorstanding
Way	1
Drivers	1 x 12" 30ND40 - dome membrane with honeycomb dome structure
Low pass filter adjustment	40 à 180 Hz
Phase adjustment	0° to 180° in 1° increments
Delay adjustment	In one foot increments
Frequency response	29 - 180 Hz
Max SPL level	104 dB
Nominal power	200 W
Peak Power	400 W
Dimensions (h x w x d)	43,5 x 37 x 46 cm
Weight	25 Kg
Finishies	Black Pearl, Glossy Black, Glossy White
